PROFILE SUMMARY

Analytical and results-oriented professional with 1.8 years of experience in transforming business processes through automation, data modeling, and dashboard development. Skilled in using Python, SQL, and Power BI to build scalable internal tools, automate repetitive workflows, and deliver actionable insights. Known for bridging technical execution with business needs, driving efficiency, and enabling data-informed decision-making across teams.

RELEVANT SKILLS

- Data analytics and Visualization: Power BI, DAX, Power Query, Tableau, Streamlit, Seaborn, Matplotlib
- Programming & Automation: Python (Pandas, NumPy), SQL, Power Automate, Selenium
- Cloud & Data Platforms: Azure, Snowflake, Render, Git
- Other Tools: Advanced Excel, Alteryx

EXPERIENCE

EY – Analyst 2

Sept 2023 – Present

- Spearheaded automation efforts in role testing by developing a **Python-based Selenium bot** with a custom Streamlit interface, enabling users to perform testing independently — reducing testing time from **2+ weeks to a few hours** and **cutting manual effort by over 40%**.
- Developed a Python + Streamlit tool to automate the SoD/SA review process, replicating and improving a legacy SQL + macro-based system. This allowed users to upload templates and receive audit results instantly via a web interface — eliminating manual steps, reducing dependency on hardcoded SQL and Macro.
- Collaborated with the security implementation team to build **Power BI dashboards** for visualizing role hierarchies, user-role mappings, and SoD violations — improving stakeholder onboarding and compliance visibility by 30%
- **Led the development of a centralized Power BI dashboard for SoD/SA analysis report**, transforming Excel-based audit reports into interactive visuals. Collaborated with engagement managers and clients to define key KPIs such as top violating roles, users, and control risk levels—enabling faster and more accurate conflict resolution.
- Drove **cross-team adoption** of the dashboard across 3+ teams, significantly reducing client review time and streamlining audit cycles by over 40%, while improving visibility into high-risk access violations and enabling better decision-making.
- Designed and implemented a **Power Apps + Power Automate**-based Leave Management System, replacing a manual, email-driven process with a centralized, automated platform. Enabled employees to submit leave requests with auto-routing to managers, color-coded status tracking and real-time recordkeeping — improving transparency, auditability, and team planning.

PROJECTS

IT SKILLS AND SALARY TRENDS IN INDIA (PYTHON | PANDAS | STREAMLIT | MATPLOTLIB | SEABORN)

- Cleaned and structured a dataset of 36,000+ job listings, ensuring high data quality for accurate insights into skill demand and salary trends across India in various tech roles.
- Performed in-depth data analysis using Python libraries like **Pandas** and **numpy** to uncover patterns in technology adoption, skills required, and regional disparities, presenting findings through compelling visualizations using **seaborn** and **matplotlib**.
- Built and deployed a responsive **Streamlit** web app on Render, enabling users to interactively explore job market insights—improving accessibility and user engagement.

ENTERPRISE-SCALE SALES DATA ANALYTICS PROJECT (PYTHON | SNOWFLAKE | SQL | POWER BI)

- Engineered a scalable, relational dataset simulating an enterprise-grade sales ecosystem by generating over **1M transactional records** across fact and dimension tables, replicating real-world data complexities.
- Loaded data into **Snowflake** using stages and performed ETL (Extract, Transform, Load) operations by writing **20+ optimized SQL queries** for transformations like data cleaning, joins, and aggregations.
- Connected to **Power BI**, leveraging **Power Query** for additional transformations, creating calculated columns, **DAX measures**, and **custom KPIs**.
- Built an interactive executive dashboard visualizing KPIs like revenue trends, customer loyalty impact, product category performance, and regional sales patterns, improving decision-making insights for simulated business operations.

EDUCATION

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science – CGPA: 8.95

May 2019 – May 2023

Chennai, Tamil Nadu
